Question What is the purpose of the trial balance in basic accounting? The trial balance is used to verify that total debits equal total credits in the ledger, ensuring the books are balanced and helping to identify any errors in recording transactions. How do you record a purchase of inventory on credit? You would debit the Inventory account and credit Accounts Payable to reflect the increase in inventory and the liability to pay the supplier later. What is the difference between a debit and a credit in accounting? A debit increases asset and expense accounts and decreases liabilities and equity, whereas a credit increases liabilities and equity and decreases assets and

expenses. How do you calculate net income in basic accounting? Net income is calculated by subtracting total expenses from total revenues during a specific period: $\text{Net Income} = \text{Revenues} - \text{Expenses}$. What is an adjusting entry, and why is it necessary? An adjusting entry is made at the end of an accounting period to update account balances before financial statements are prepared, ensuring revenues and expenses are recorded in the correct period. How do you handle a prepaid expense in basic accounting practice? Prepaid expenses are initially recorded as assets and then gradually expensed over time as the benefit is used, by making adjusting entries to transfer the appropriate amount from an asset to an expense.
