Sample Final Exam Questions and How to Approach Them

It's helpful to familiarize yourself with typical questions you might encounter on the exam. Here are examples with approaches to solving them:

Question 1: Cost-Volume-Profit Analysis

A company's fixed costs are \$50,000. The selling price per unit is \$25, and variable costs per unit are \$15. How many units must be sold to break even?

Approach:

- Identify the contribution margin per unit: $\$25 - \$15 = \$10$.
- Use the breakeven formula: $\text{Fixed Costs} / \text{Contribution Margin per Unit}$.
- Calculation: $\$50,000 / \$10 = 5,000$ units.

Answer: The company needs to sell 5,000 units to break even.

Question 2: Budget Variance Analysis

?A manufacturing department budgeted \$100,000 for materials. The actual cost was \$120,000. What is the material cost variance, and is it favorable or unfavorable??

Approach:

- $\text{Variance} = \text{Actual Cost} - \text{Budgeted Cost}$.
- Calculation: $\$120,000 - \$100,000 = \$20,000$.
- Since actual cost exceeds the budget, the variance is unfavorable.

Answer: The material cost variance is \$20,000 unfavorable.
